CONTENTS

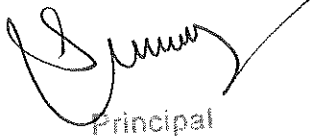

<i>Contents</i>	
<i>Symbols</i>	
<i>Part of History of Electronics</i>	

Chapter 1

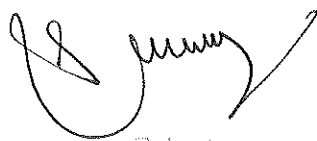

Electron Dynamics and CRO	1-39
1.1 Electron Dynamics.....	2
1.2 Motion of Charged Particles in Electric and Magnetic Fields.....	2
1.3 Simple Problems Involving Electric and Magnetic Fields Only	24
1.4 Principles of CRT.....	26
1.5 Deflection Sensitivity.....	29
1.6 Applications ofCRO	36
Summary.....	36
Objective Type Questions.....	37
Essay Type Questions	38
Multiple Choice Questions	38

Chapter2

Junction Diode Characteristics	39-134
2.1 Review of Semiconductor Physics.....	40
2.2 Energy Band Structures.....	61
2.3 Conduction in Semiconductors	62
2.4 Conductivity of an Intrinsic Semiconductor	66

Principal
Chaitanya Engineering College
Kommadi, VISAKHAPATNAM-530 049

2.5	Donor Type or n-Type Semiconductors	67
2.6	Acceptor Type or p-Type Semiconductors.....	68
2.7	Ionization Energy	68
2.8	Holes and Electrons.....	68
2.9	Mass Action Law	70
2.10	Law of Electrical Neutrality.....	70
2.11	The Fermi Dirac Function	75
2.12	Total Current in a Semiconductor	84
2.13	Einstein Relationship	90
2.14	Continuity Equation.....	90
2.15	The Hall Effect.....	92
2.16	Semiconductor Diode Characteristics	96
2.17	The p-n Junction Diode in Reverse Bias.....	98
2.18	The p-n Junction Diode in Forward Bias.....	98
2.19	Band Structure of an Open Circuit p-n Junction.....	99
2.20	The Current Components in a p-n Junction Diode.....	102
2.21	Law of the Junction.....	103
2.22	Diode Current equation	104
2.23	Volt-Ampere Characteristics of a p-n Junction diode.....	105
2.24	Temperature Dependence of p-n Junction Diode Characteristics	107
2.25	Space Charge or Transition Capacitance C_T	108
2.26	Diffusion Capacitance, C_D	111
2.27	Diode Switching Times	113
2.28	Break Down Mechanism	118
2.29	Zener Diode.....	119
2.30	The Tunnel Diode	120
2.31	Varactor Diode	123
	Summary	129
	Objective Type Questions	130
	Essay Type Questions.....	131
	Multiple Choice Questions	132

Principal
Chokkany Engineering College
Koramadi VISAKHAPATNAM

Chapter3

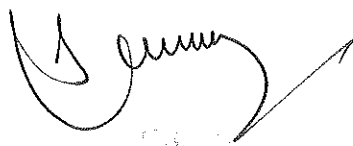

Rectifiers, Filters and Regulators.....135-184

3.1	Rectifiers.....	136
3.2	Half-Wave Rectifier.....	136
3.3	Full Wave Rectifier (FWR).....	146
3.4	Bridge Rectifiers.....	150
3.5	Comparison of Rectifier Circuits.....	151
3.6	Voltage Doubler Circuit.....	152
3.7	Inductor Filter Circuits.....	152
3.8	Capacitor Filter.....	157
3.9	LC Filter.....	161
3.10	CLC or π Filter.....	165
3.11	Multiple LC Filters.....	169
3.12	Introduction to Regulators.....	173
3.13	Terminology.....	182
	Summary.....	183
	Objective Type Questions.....	183
	Essay Type Questions.....	84
	Multiple Choice Questions.....	184

Chapter4

Transistor Characteristics..... 185-266

4.1	Bipolar Junction Transistors (BJT's).....	186
4.2	Transistor Construction.....	190
4.3	The Ebers-Moll Equation.....	191
4.4	Types of Transistor Configurations.....	192
4.5	Convention for Transistors and Diodes.....	202
4.6	Field Effect Transistor (FET).....	213
4.7	FET Structure.....	215
4.8	FET Operation.....	219
4.9	JFET Volt-Ampere Characteristics.....	222

THE HUMAN RESOURCE DEVELOPMENT CORPORATION
KANDIVALI, MUMBAI 400 062

4.10	Transfer Characteristics of FET	224
4.11	FET Small Signal Model	228
4.12	FET Tree	233
4.13	The Depletion MOSFET	240
4.14	CMOS Structure (Complementary MOS)	243
4.15	Silicon Controlled Rectifier	246
4.16	Unijunction Transistor (UJT).....	251
4.17	LED's	255
4.18	Photo Diodes	255
4.19	Photo Transistors	256
	Summary.....	257
	Objective Type Questions	258
	Essay Type Questions	259
	Multiple Choice Questions	260

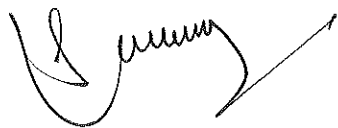

Chapter5

Transistor Biasing and Stabilization261-312

5.1	Transistor Biasing	268
5.2	Fixed Bias Circuit or (Base Bias Circuit).....	270
5.3	Bias Stability	271
5.4	Thermal Instability	271
5.5	Stability Factor 'S' for Fixed Bias Circuit.....	272
5.6	Collector to Base Bias Circuit	273
5.7	Self Bias or Emitter Bias Circuit	276
5.8	Stability Factor 'S' for Self Bias Circuit.	277
5.9	Stability Factor S'.....	278
5.10	Stability Factor S" for Self Bias Circuit.....	280
5.11	Practical Considerations	280
5.12	Bias Compensation	281
5.13	Biasing Circuits For Linear Integrated Circuits.....	284

Principal
 Chaitanya Engineering College
 Komandla VISAKHAPATNAM-533 018

5.14	Thermistor and Sensistor Compensation	285
5.15	Thermal Runaway.....	286
5.16	Stability Factor S" for Self Bias Circuit.....	292
5.17	FET Biasing	298
5.18	Basic FET Circuits	302

Brief History of Electronics

In science we study about the laws of nature and its verification and in technology, we study the applications of these laws to human needs.

Electronics is the science and technology of the passage of charged particles in a gas or vacuum or semiconductor.

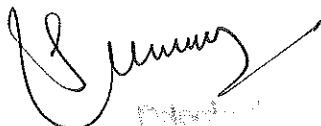

Before electronic engineering came into existence, electrical engineering flourished. Electrical engineering mainly deals with motion of electrons in metals only, whereas Electronic engineering deals with motion of charged particles (electrons and holes) in metals, semiconductors and also in vacuum. Another difference is, in electrical engineering the voltages and currents are of very high-kilovolts, and Amperes, whereas in electronic engineering one deals with few volts and mA. Yet another difference is, in electrical engineering, the frequencies of operation are 50 Hertz/60 Hertz, whereas in electronics, it is KHzs, MHz, GHzs, (high frequency).

The beginning for Electronics was made in 1895, when H.A. Lorentz postulated the existence of discrete charges called *electrons*. Two years later, J.J. Thomson proved the same experimentally in 1897.

In the same year, Braun built the first tube, based on the motion of electrons, and called it *Cathode ray tube* (CRT).

In 1904, Fleming invented the Vacuum diode called '*valve*'.

In 1906, a semiconductor diode was fabricated but they could not succeed, in making it work. So, semiconductor technology met with premature death and vacuum tubes flourished.

S. Kumar
Assistant Professor
Department of Electronics
Government Engineering College
Kannur, Kerala

In 1906 itself, De Forest put a third electrode into Fleming's diode and he called it *Triode*. A small change in grid voltage produces large change in plate voltage in this device.

In 1912 Institute of Radio Engineering (IRE) was set up in USA to take care of the technical interests of electronic engineers. Before that, in 1884 Institute of Electrical Engineers was formed and in 1963 both institutes merged into one association called IEEE (Institute of Electrical and Electronic Engineers).

The first radio broadcasting station was built in 1920 in USA.

In 1930, black and white television transmission started in USA.

In 1950, Colour television broadcasting was started.

The electronics Industry can be divided into 4 categories :

Components	Transistors, ICs, R, L, C components
Communications	Radio, Television, Telephone - wireless, landline communications
Control	Industrial electronics, control systems
Computation	Computers

Vacuum Tubes ruled the electronic field till the invention of transistors. The difficulty with vacuum tubes was, it generated lot of heat. The filaments get heated to $> 2000^{\circ} \text{K}$, so that electron emission takes place. The filaments get burnt and tubes occupy large space. So in 1945, Solid State Physics group was formed to invent semiconductor devices in Bell Labs, USA.

Major milestones in development of Electronics :

1895 : H. A. Lorentz - Postulated existence of Electrons

1897 : J.J. Thomson - Proved the same

1904 : Fleming invented Vacuum Diode

1906 : De Forest developed Triode

1920 : Radio Broadcasting in USA

1930 : Black and White Television Transmission in USA.

1947: Shockley - invented the junction transistor. (BJT)

1950: Colour Television Transmission started in USA.

1959: Integrated circuit concept was announced by Kilby at an IRE convention.

1969: LSI, IC - Large Scale Integration, with more than 1000 but $< 10,000$ components per chip (integrated or joined together), device was announced.

1969: SSI 10 - 100 components/chip, LOGIC GATES, FFs were developed.

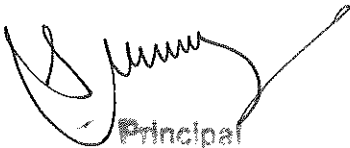

1970: INTEL group announced, chip with 1000 Transistors (4004m)

1971 : 4 bit Microprocessor was made by INTEL group.

1975: VLSI : Very large scale integration $> 10,000$ components per chip. ICs were made.

1975 : CMOS - Complimentary High Metal Oxide Semiconductor ICs were announced by INTEL group.

1975 : MSI (Multiplenum, Address) 100 - 1000 components/chip was developed.

Principal
Chaitanya Engineering College
Konnadi, VISAKAPATNAM

- 1978: LSI 8 bit microprocessors (μ p), ROM, RAM 1000 - 10,000 components/chip
- 1980: VLSI > 1,00,000 components/chip, Ex : 16 bit and 32 bit μ Ps
- 1981: 16 bit μ p > 1,00,000 components/chip, Ex : 16 bit and 32 bit μ Ps
- 1982: 100,000 Transistors, (80286) was developed
- 1984: CHMOS > 2,00,000 components/chip Ex : 16 bit and 32 bit μ Ps
- 1985: 32 bit μ p > 4,50,000 components/chip Ex : 16 bit and 32 bit μ Ps
- 1986: 64 bit μ p > 10,00,000 components/chip Ex: 16 bit and 32 bit μ Ps
- 1987: MMICS Monolithic Microwave Integrated Circuits
- 1989: i860 Intel's 64 bit CPU developed
- 1990s: ULSI > 500,000 Transistors; Ultra Large Scale Integration
GS! > 1,000,000 Transistors; Giant Scale Integration
- 1992 : 3 million Transistors, (Pentium series)
- 1998: 2 Million Gates/Die
- 2001: 5 Million Gates/ Die
- 2002: 1 Gigabit Memory Chips
- 2003: 10 nanometer patterns, line width
- 2004: Commercial Super Computer 10T. Flip Flops developed.
- 2010: Neuro - Computer Using Logic Structure Based on Human Brain likely
Still Nature is superior. There are 10^7 cells/cm³ in human brain

Development of VLSI Technology:

3 μ Technology

0.5 μ Technology

0.12 μ Technology

ASICs (Application Specific Integrated Circuits)

HYBRIDICs

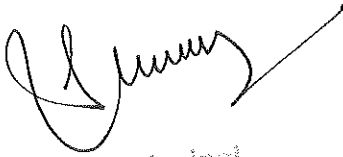

BI CMOS

MCMs (Multi Chip Modules)

3-D packages

Table showing predictions made in 1995 on VLSI Technology

	1995	1998	2001	2004	2007
Lithography (μ)	0.35	0.25	0.18	0.12	0.1
No. Gates/Die :	SOOK	2M	SM	10 M	20M
No. Bits/Die					
Dram	64 M	256	JG	4G	16G
Sram	16M	64 N	256 M	1G	4G
Wafer Dia (mm)	200	200-400	-400	-400	-400
Power (μ W/Die)	15	30	40	40-120	40-200
Power Supply. V.	3.3	2.2	2.2	1.5	1.5
Frequency MHz	100	175	250	350	500

Contents

Chapter 1 Introduction	1
1.1 Themes	1
1.2 Signals Represent Information.....	2
1.2.1 Analog Signals.....	3
1.2.2 Digital Signals	4
1.3 Structure of Communication Systems.....	5
1.4 The Fundamental Signal.....	7
1.4.1 The Sinusoid	7
Exercise 1.4.1	8
Exercise 1.4.2.....	8
1.4.2 Communicating Information with Signals.....	8
1.5 Introduction Problems	9
1.6 Solutions to Exercises in Chapter 1.....	10
Chapter 2 Signals and Systems	11
2.1 Complex Numbers.....	11
2.1.1 Definitions.....	11
Exercise 2.1.1	13
Exercise 2.1.2.....	13
2.1.2 Euler's Formula	13
2.1.3 Calculating with Complex Numbers.....	14
Exercise 2.1.3.....	15
Example 2.1	16
2.2 Elemental Signals	16
2.2.1 Sinusoids	16
2.2.2 Complex Exponentials	17
2.2.3 Real Exponentials.....	18
2.2.4 Unit Step	18
2.2.5 Pulse.....	20
2.2.6 Square Wave.....	20
2.2.7 Signal Decomposition	21
Example 2.2	21
Exercise 2.3.1.....	21
2.3 Discrete-Time Signals	21
2.3.1 Real-and Complex-valued Signals.....	22
2.3.2 Complex Exponentials	22
2.3.3 Sinusoids	23
2.3.4 Unit Sample.....	23
2.3.5 Symbolic-valued Signals.....	24
2.3.6 Introduction to Systems	24
2.3.6.1 Cascade Interconnection	25
2.3.7 Parallel Interconnection.....	25

2.3.8 Feedback Interconnection.....	26
2.4 Simple Systems	27
2.4.1 Sources	27
2.4.2 Amplifiers	27
2.4.3 Delay	28
2.4.4 Time Reversal	28
Exercise 2.6.1	28
2.4.5 Derivative Systems and Integrators	29
2.4.6 Linear Systems	29
2.4.7 Time-Invariant Systems.....	30
2.5 Signals and Systems Problems.....	32
Problem 2.1: Complex Number Arithmetic	32
Problem 2.2: Discovering Roots	32
Problem 2.3: Cool Exponentials	32
Problem 2.4: Complex-valued Signals.....	33
Problem 2.5:	34
Problem 2.6:	35
Problem 2.7: Linear, Time-Invariant Systems.....	36
Problem 2.8: Linear Systems	37
Problem 2.9: Communication Channel	37
Problem 2.10: Analog Computers	38
2.6 Solutions to Exercises in Chapter 2.....	38
Chapter 3 Analog Signal Processing	40
3.1 Voltage, Current, and Generic Circuit Elements	40
Exercise 3.1.1	41
3.2 Ideal Circuit Elements	41
3.2.1 Resistor.....	42
3.2.2 Capacitor	42
3.2.3 Inductor	43
3.2.4 Sources	44
3.3 Ideal and Real-World Circuit Elements	44
3.4 Electric Circuits and Interconnection Laws	45
3.4.1 Kirchhof's Current Law	46
Exercise 3.4.1	47
3.4.2 Kirchhof's Voltage Law (KVL)	47
Exercise 3.4.2	48
3.5 Power Dissipation in Resistor Circuits.....	48
Exercise 3.5.1	50
Exercise 3.5.2	50
3.6 Series and Parallel Circuits	50
Exercise 3.6.1	52
Exercise 3.6.2	54
Example 3.1.....	55
Exercise 3.6.3	56
3.7 Equivalent Circuits: Resistors and Sources.....	57

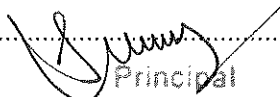

Exercise 3.7.1	59
Example 3.2.....	59
Exercise 3.7.2	61
3.8 Circuits with Capacitors and Inductors	62
3.9 The Impedance Concept	63
3.10 Time and Frequency Domains.....	65
Example 3.3	67
Exercise 3.10.1	68
3.11 Power in the Frequency Domain.....	68
Exercise 3.11.1	69
Exercise 3.11.2	70
3.12 Equivalent Circuits: Impedances and Sources	70
Example 3.4	72
3.13 Transfer Functions.....	73
Exercise 3.13.1	76
3.14 Designing Transfer Functions.....	76
Example 3.5	77
3.15 Formal Circuit Methods: Node Method.....	79
Example 3.6: Node Method Example	82
Exercise 3.15.1	83
Exercise 3.15.2	84
3.16 Power Conservation in Circuits	84
3.17 Electronics.....	86
3.18 Dependent Sources.....	86
3.19 Operational Amplifiers.....	89
3.20 Inverting Amplifier	90
3.21 Active Filters	91
Example 3.7.....	92
Exercise 3.19.1	93
3.22 Intuitive Way of Solving Op-Amp Circuits	93
Example 3.8.....	95
3.23 The Diode.....	96
3.24 Analog Signal Processing Problems	98
Problem 3.1: Simple Circuit Analysis	98
Problem 3.2: Solving Simple Circuits.....	99
Problem 3.3: Equivalent Resistance.....	99
Problem 3.4: Superposition Principle.....	100
Problem 3.5: Current and Voltage Divider.....	101
Problem 3.6: Thevenin and Mayer-Norton Equivalents	101
Problem 3.7: Detective Work.....	102
Problem 3.8: Bridge Circuits	102
Problem 3.9: Cartesian to Polar Conversion.....	103
Problem 3.10: The Complex Plane.....	103
Problem 3.11: Cool Curves.....	103
Problem 3.12: Trigonometric Identities and Complex Exponentials	104
Figure 3.61 Problem 3.13: Transfer Functions.....	104

Problem 3.14: Using Impedances	105
Problem 3.15: Measurement Chaos	105
Problem 3.16: Transfer Functions	106

Detailed Contents

<i>Preface</i>	<i>xiii</i>
	 <i>xv</i>
<i>About the Authors</i>	 <i>xvii</i>
Chapter 1: Modern Physics		1-36
1.1	Introduction to Physics 1
1.2	Introduction to Blackbody Radiation Spectrum 2
	1.2.1 Introduction to Modern Physics 2
	1.2.2 Blackbody Radiation 3
	1.2.3 Blackbody Radiation Spectrum 3
	1.2.4 Energy Distribution in Blackbody Radiation Spectrum 4
	1.2.5 Laws of Blackbody Radiation 4
1.3	Photo-electric Effect 7
	1.3.1 Definition 7
	1.3.2 Experimental Study 8
	1.3.3 Laws of Photoelectric Effect 10
	1.3.4 Einstein's Photoelectric Equation 10
1.4	Compton Effect 11
	1.4.1 Definition 12
	1.4.2 Expression for Compton Shift 12
	1.4.3 Experimental verification of Compton Shift 14
1.5	Wave Particle Dualism 16
	1.5.1 de-Broglie Hypothesis 16
	1.5.2 de-Broglie's wavelength 16
	1.5.3 de-Broglie's Wavelength-Extension to Electron Particle 17
	1.5.4 Davison and Germer Experiment 18
1.6	Matter Waves and their Characteristic Properties 20
	1.6.1 Phase velocity, Group velocity and Particle velocity 20
	1.6.2 Relation between Phase velocity and Group velocity 22
	1.6.3 Relation between Group velocity and Particle velocity 22
	1.6.4 Expression for de-Broglie wavelength using Group velocity 23

Principal
Chaitanya Engineering College
Konnadi VISAKHAPATNAM-530 048

1.6.5	Relation between Group velocity, Phase velocity and velocity of Light.....	23
	<i>Solved Problems</i>	24
	<i>Exercises</i>	30

Chapter 2: Quantum Mechanics **37–56**

2.1	Introduction.....	37
2.2	Heisenberg’s Uncertainty Principle and its Physical Significance	38
2.2.1	Statement of Heisenberg’s Uncertainty Principle	38
2.2.2	Heisenberg’s Uncertainty Principle applied to Position and Momentum.....	38
2.2.3	Heisenberg’s Uncertainty Principle applied to Energy and Time	38
2.2.4	Illustration: Heisenberg Microscope.....	39
2.2.5	Physical Significance	40
2.3	Application of Uncertainty Principle	40
2.3.1	Why Electron cannot be Present Inside the Nucleus?.....	40
2.4	Wave function, Properties and Physical Significance.....	41
2.4.1	Wave Function.....	41
2.4.2	Properties of Wave Function	41
2.4.3	Physical Significance	41
2.5	Probability Density and Normalization of Wave Function.....	41
2.6	Setting up of a One Dimensional, Time Independent, Schrödinger Wave Equation.....	41
2.6.1	Schrödinger Wave Equation	41
2.6.2	Derivation.....	42
2.6.3	Eigen Values and Eigen Function.....	43
2.7	Application of Schrödinger Wave Equation.....	43
2.7.1	The Particle in a Box of Infinite Depth	43
2.7.2	Energy Eigen Values and Functions of a Particle in a Potential Well of Infinite Depth	44
2.7.3	Energy Eigen Values for a Free Particle.....	46
	<i>Solved Problems</i>	46
	<i>Exercises</i>	51

Chapter 3: Electrical Conductivity in Metals **57–80**

3.1	Introduction.....	57
3.2	Properties of Metals.....	58
3.3	Classical Free Electron Theory.....	58
3.3.1	Free-electron Concept.....	58
3.3.2	Assumptions of Classical Free-electron Theory	58

Principal
Chaitanya Engineering College
Kommadi VISAKHAPATNAM-530 048

3.3.3	Expression for Drift Velocity 59
3.3.4	Expression for Electrical Conductivity in Metals 59
3.3.5	Effect of Impurity and Temperature on Electrical Resistivity of Metals 60
3.3.6	Failure of Classical Free-electron Theory 62
3.4	Quantum Free-electron Theory 62
3.4.1	Assumptions 62
3.4.2	Fermi-Dirac Statistics 63
3.4.3	Fermi-energy – Fermi Factor 63
3.4.4	Density of States 64
3.4.5	Expression for Electrical Resistivity/Conductivity 66
3.4.6	Temperature Dependence of Resistivity of Metals 67
3.4.7	Merits of Quantum Free–electron Theory 67
	<i>Solved Problems</i> 68
	<i>Exercises</i> 74
Chapter 4: Dielectric and Magnetic Properties of Materials		81–106
4.1	Introduction to Dielectric Materials 81
4.2	Dielectric Constant and Polarization of Dielectric Materials 82
4.2.1	Dielectric Material 82
4.2.2	Polarization of Dielectrics 82
4.2.3	Dielectric Constant 83
4.2.4	Dielectric Susceptibility 83
4.2.5	Polarizability 83
4.2.6	Relation between Dielectric Constant & Polarization 83
4.3	Types of Polarization 84
4.3.1	Electronic Polarization (Optical polarization) 84
4.3.2	Ionic Polarization 85
4.3.3	Orientalional Polarization 85
4.3.4	Space Charge Polarization 86
4.3.5	Frequency and Temperature Dependence of Polarization 86
4.4	Equation for Internal fields in Liquids and Solids 87
4.4.1	Internal Fields in Liquids & Solids 87
4.4.2	Expression for One Dimensional Internal Field 87
4.5	Classius–Mussoti Equation 90
4.6	Frequency dependence of dielectric constant 91
4.7	Ferro and Piezo – electricity 91
4.7.1	Ferroelectric Materials 91
4.7.2	Properties of Ferroelectric Materials 92
4.7.3	Piezoelectric Materials 92

Principal
Chaitanya Engineering College
 Kommadi VISAKHAPATNAM-530 048

4.8	Important Applications of Dielectric Materials.....	93
4.9	Classification of Magnetic Materials.....	95
4.9.1	Diamagnetic Materials.....	96
4.9.2	Paramagnetic Materials.....	97
4.9.3	Ferromagnetic Materials.....	98
4.10	Hysteresis in Ferromagnetic Materials.....	99
4.10.1	Definition.....	99
4.10.2	Explanation of Hysteresis Curve.....	99
4.10.3	Hysteresis Loss.....	100
4.11	Soft and Hard Magnetic Materials.....	100
4.11.1	Hard Magnetic (H.M) Materials.....	100
4.11.2	Properties H.M. Materials.....	101
4.11.3	Applications of H.M. Materials.....	101
4.11.4	Soft Magnetic (S.M) Materials.....	101
4.11.5	Properties S.M. Materials.....	102
4.11.6	Applications of S.M. Materials.....	102
	<i>Solved Problems</i>	93
	<i>Exercises</i>	103

Chapter 5: Lasers **107-138**

5.1	Introduction.....	107
5.1.1	Characteristics of Laser.....	108
5.2	Principle and Production of Laser.....	109
5.2.1	Induced Absorption.....	109
5.2.2	Spontaneous Emission.....	110
5.2.3	Stimulated Emission.....	110
5.2.4	Einstein's Coefficients (expression for energy Density).....	111
5.2.5	Requisites of a Laser System.....	113
5.2.6	Condition for Laser Action.....	115
5.2.7	Types of Lasers.....	117
5.3	He-Ne Laser.....	118
5.3.1	Principle.....	118
5.3.2	Construction.....	119
5.3.3	Working.....	120
5.3.4	Applications.....	120
5.4	Semiconductor Laser.....	120
5.4.1	Principle.....	120
5.4.2	Construction.....	121
5.4.3	Working.....	122

Preface

The objective of this book is to deliver an in-depth knowledge on principles of Engineering Physics to the student population to increase their general grasp on the topic. This book follows the most up-to-date curriculum of Visvesvaraya Technological University in Belgaum, Karnataka, and is intended as a textbook for first-year students in all areas of engineering. Modern physics is introduced with a focus on its foundational ideas and principles.

There are eight parts to the book. Blackbody radiation spectrum, photoelectric effect, Compton effect, wave particle dualism, de-Broglie hypothesis, de-Broglie wavelength, electron particle extension, Davisson and Germer experiment, matter waves, and their characteristic properties, and an expression for de-Broglie wavelength using group velocity are all covered in the first chapter, Modern Physics. The physical importance of Heisenberg's uncertainty principle is discussed in the second chapter, "Quantum Mechanics." Particle's energy eigenvalues when it's free and when it's in an infinitely deep potential well are all results of the wave function, the time-independent Schrödinger wave equation, and their respective applications. The third chapter is dedicated to the topic of electrical conductivity in metals and covers topics such as the free-electron concept, the classical free-electron theory, the expression for drift velocity, the expression for electrical conductivity in metals, the failure of the classical free-electron theory, the quantum free-electron theory, the Fermi-Dirac statistics, the expression for electrical resistivity/conductivity, and the temperature dependence of metals' resistivity. Chapter 4 covers the dielectric constant and polarization of dielectric materials, as well as other dielectric and magnetic properties of materials. Different polarization types. Internal field equation for fluids and solids, Equation of Clausius and Mussoi, The electricity of Ferro and Piezo, Dielectric constant as a function of frequency, Soft and hard magnetic materials, hysteresis in ferromagnetic materials, and the classification of diamagnetic, paramagnetic, and ferro-magnetic materials.

Principle and production, Einstein's coefficients, condition for Laser action, principle, building and functioning of He-Ne and semiconductor Laser, Applications of Laser, and Holography - Principle of Recording and reconstruction of 3-D pictures are all covered in the fifth and final chapter on Lasers. Propagation mechanism in optical fibers, Optical fiber types and modes of propagation, Optical fiber applications, Temperature dependence of resistivity in superconducting materials, and so on are all covered in the sixth chapter, "Optical Fibers and Superconductivity." Superconductors and their uses, as well as the effect of a magnetic field, Type I and Type II superconductors, the BCS theory, and high-temperature superconductors. Crystal systems, Miller indices, an expression for inter-planar spacing, the atomic packing factor, and the determination of the crystal structure using Bragg's X-ray spectrometer are all covered in the seventh chapter on crystal structures. Nano-science and nano-technology, nano-material shapes, nano-material production methods, ultrasonic non-destructive testing of materials, and velocity measurements in solids and liquids are discussed in the last chapter on material science.

We worked hard to ensure that this textbook was both error-free and a valuable resource for our students. At the book's conclusion are two complete mock exams. Unit questions, objective-style questions, and assignment problems are included at the conclusion of each chapter. The authors would appreciate hearing from readers who have suggestions about how to make this book better.
